function of the collisionless gas. The solution of the equation system yielded a system of algebraic equations characterizing perturbed values of parameters. Individual algebraic equations characterize a subsystem of magnetohydrodynamic waves which are independent of gravity and compressibility. The equation dealing with interstellar gas contains the relative phase velocity of the wave which determines the position of the wave in the gas. The author expresses thanks to L. S. Marochnik for instructions and attention. Orig. art. has: 22 formulas. [EG]

TITLE: Critical wavelength in the system of a collisionless gas and solid medium in a homogeneous magnetic field

SOURCE: AN TadzSSR. Doklady, v. 9, no. 3, 1966, 17-20

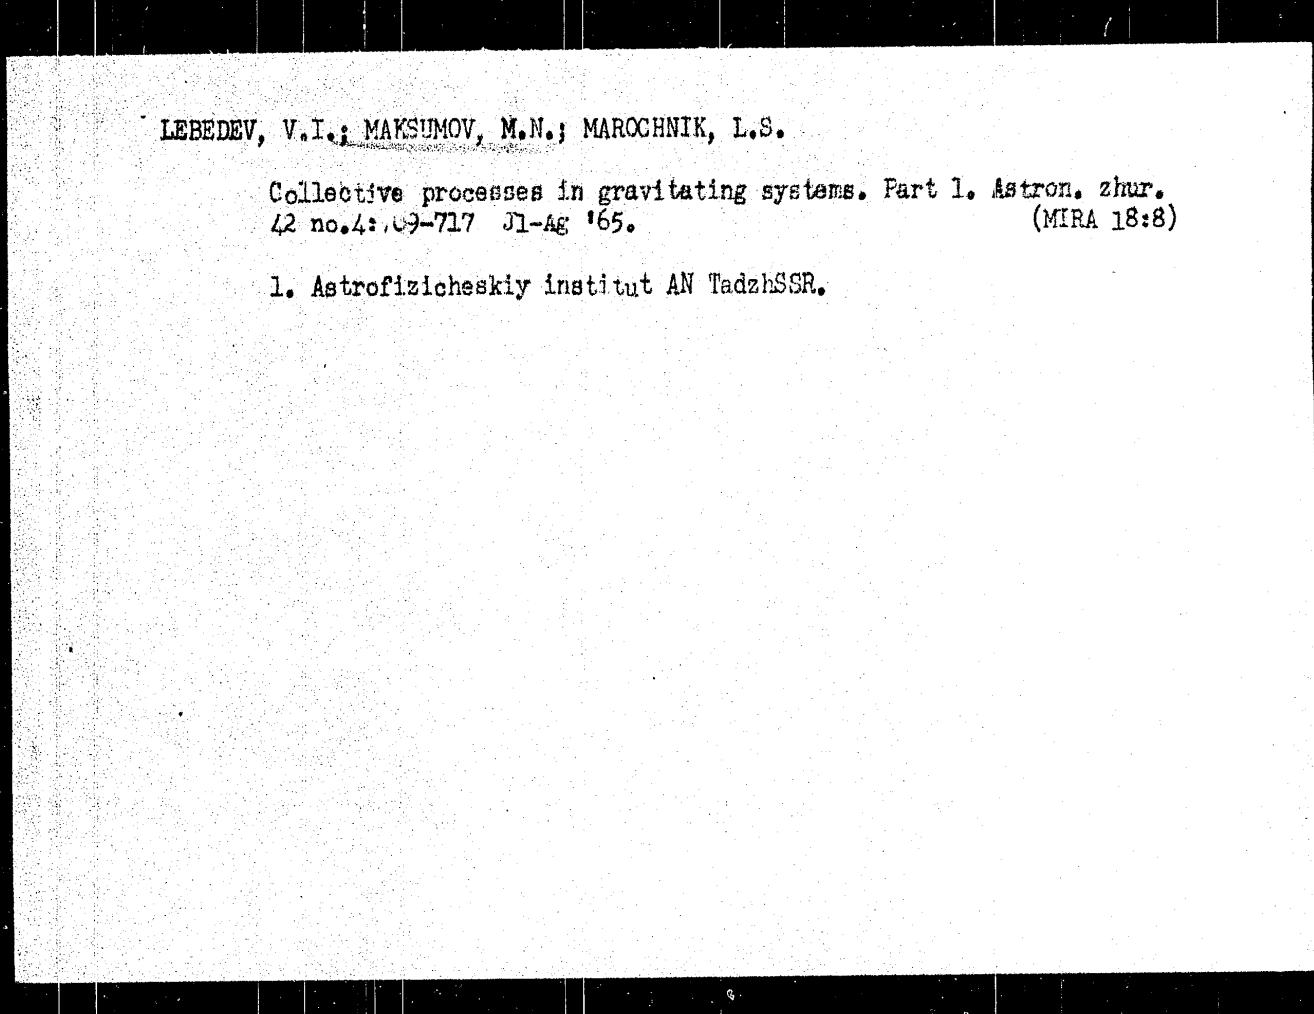

TOPIC TAGS: critical wavelength, self gravitating gas, homogeneous magnetic field, magnetic hydrodynamics, gravitational potential, interstellar gas

ABSTRACT: The critical wavelength  $\lambda_{cr}$  within a gravitating system determines the limit of the stability of small-amplitude flat waves within that system. The critical wavelength is studied in an infinite homogeneous system consisting of a collisionless gas and self-gravitating particles. The gas has infinite conductivity in a homogeneous magnetic field. The dynamics of such a system is expressed by equations of magnetohydrodynamics, by Boltzmann's integral for the function of particle distribution in a collisionless gas, and by Poisson's equation of the gravitational potential of a self-coordinated field. Equations are developed for determining small deviations from equilibrium values in the magnetic field, in hydrodynamic velocity, in density, in the gravitational potential, and in the distribution

of the daily temperature was 26.7°. The medium and the late ripening varieties such as 108-f, G-460, G-1225 and the fine fibered 5904-I, and not the early ripening ones, are the most adaptable varieties suited for cultivation on unirrigated plots which are provided with sufficient amount of rainfall. The vegetation period is shortened by 15 - 33 days (depending on varieties) as a result of cultivation of cotton on the unirrigated land. The height of the plant increases. The growing of the first sympodial branch starts 1 - 2 nodes lower, the accumulation of fruit organs increases as well as the number of surviving bolls. Instead of a continuous blooming, two sharply

TITLE: An algorithm for Armenian-Russian machine translation. I (General description) 1/6

SOURCE: Problemy kibernetiki, no. 4, 1965, 221-244

TOPIC TAGS: translation algorithm, machine translation, syntactic analysis, syntactic synthesis, idiom identification

ABSTRACT: The algorithm for Armenian-Russian machine translation whose general description is presented in this article is based on the principle of independent analysis and synthesis. This means that during the first stage of the operation the machine carries out the grammatical and meaning analysis of the Armenian text while during the second it synthesizes the corresponding Russian text on the basis of the information gathered during the analysis. The authors outline the structure of the dictionary and the method of morphological synthesis of the Russian sentence.

Title : The Pre-Fertile Period of Development in Karakul Sheep.

Orig Pub : UzSSR fanlar akad. dokl. AN UzSSR, 1956, No. 5,  
51-54

Abstract : A short description is given of the external appearance and structure of some internal organs of prefertile Karakul sheep of various ages. The integument, skeleton, cerebrum, trachea, lungs, heart, digestive tract, pancreas, liver, kidneys, suprarenals, gonads, and thyroid, were studied. It was noted that the 48-day pre-fertile period is akin to the fertile period in external appearance, but that the pure embryonal organs like the elemental kidneys are still preserved. On this basis, some change is proposed in the

Applications of filter fabrics ...

thermal resistance; but owing to its high costs, it is used only for very aggressive media, e.g. for abstracting hot sulfuric acid vapors, and for ultrasonic filtration at temperatures up to 100°C. (6) The polyolefin fiber polypropylene is more suitable than polyethylene, and will probably be used for various technical purposes. Filter cloths from synthetic fibers are produced experimentally (a) Kapron by the TsNIIShersti; (b) Nitron by the TsNIIShersti and TsNIKhBI; and (c) Anid by the Dedovskaya kordnaya fabrika (Dedovsk Cord Plant). There are 4 tables.

Applications of filter fabrics ...

ence with Soviden (Saran) has yet been gained in the USSR. (2) Owing to its chemical resistance, the polyamide fiber Enant ist said to be more suitable than Kapron (USSR), nylon (foreign) and Anid; so far, no laboratory and industrial experiments have been conducted. For 1 1/2 years the Kapron vacuum filters have been used in the Slavyanskiy sodovyy kombinat (Slavyansk Soda Combine); the Mikhaylovskiy sodovyy kombinat (Mikhaylovka Soda Combine) also proved the chemical resistance of Kapron filters. Anid was found to be a good cord for filter material. (3) Owing to its heat resistance, the polyacrylonitrile fiber nylon is better suited than Chlorin for phosphoric acid filtration. Experiments conducted at the Aktyubinskiy khimkombinat (Aktyubinsk Chemical Combine) were successful. Nitron proved to be resistant to organic solvents. (4) The polyester fiber Lavsan (Terylene) offers almost the same chemical resistance as Nitron, its mechanical properties, however, are better; Lavsan well suited as a cord for vacuum filters, is also planned to be used for special clothing. The NIUIF ordered a special fabric for this cord, the suitability of which will be tested in the near future. Experiments in extracting sulfuric acid vapor from the waste gases of contact processes gave good results. (5) Ftorlon (Teflon) has the highest chemical and

Maksudov, G. A.

TITLE:

Applications of filter fabrics from new, chemically resistant fibers in basic chemical industry

SOURCE:

Primeneniye polimerov v antikorrozionnoy tekhnike. Ed. by I. Ya. Klinov and P. G. Udyma. Moscow, Mashgiz, 1962. Vses. sovet nauchno-tekhn. obshchestv. 102 - 112

TEXT: A survey is given on the possibilities of using synthetic fibers for filter cloth. Parts of the author's earlier studies on the chemical resistance of fibers are reproduced (G. A. Maksudov, Issledovaniye khimicheskoy stoykosti fil'troval'nykh tkaney iz novykh sinteticheskikh volokon (Study of the chemical resistance of filter cloth from new synthetic fibers) Fond NIUIF No. T-10027, 1958). Synthetic fibers are characterized as follows: (1) Among vinyl chloride-base and vinylidene chloride-base polymers, Chlorin is the one used most frequently in the USSR, e.g. for filtering phosphoric acid fluorides and silico-fluorides. So far, only two filter cloths have been produced. No industrial experi-

Poluprovodnikovyye termosoprotivleniya; sbornik statey (Thermistors; Collection of Articles) Moscow, Gosenergoizdat, 1959. 229 p. 13,000 copies printed.

Ed. (Title page): B. S. Sotskov, Doctor of Technical Sciences, Professor; Ed. (Inside book): V. A. Petrov; Tech. Ed.: G. I. Matveyev; Editorial Board: B. S. Sotskov, Doctor of Technical Sciences, Professor (Chief Ed.), N. P. Udalov, Candidate of Technical Sciences, N. S. Zaytsev, Engineer, Ye. N. Skogorev, Engineer, and V. I. Turkulets, Engineer.

PURPOSE: This collection of articles is intended for engineering and technical personnel of plants, OKB, NII and also instructors and students of vuzes.

COVERAGE: The book contains articles dealing with problems of manufacture of thermistors and determining thermistor parameters and characteristics. The authors also discuss problems of industrial application of thermistors as control elements. The book is an effort of cooperation by scientists of a number of vuzes, members of NII and engineers of one of the plants (name is not given) of Mosgorskovnarkhoz. No personalities are mentioned. References appear at the end of some articles.
